

Exploring Tele Dentistry within a School-Based Health Center Model

During the fifth session of this webinar series, attendees requested the resources in the chat be shared with everyone. Below are the resources that our participants and panelists shared.

Consents: A participant shared that their SBHC consents are within the school registration packets

Participation: A participant shared that they give a pizza party to each classroom that has a 100% participation.

Set Up: A participant shared that their service uses a dental bus. The entire set up remains on the bus, reducing concerns about contamination in school.

Reopening: The ADA just released fabulous guidelines on re-opening. You have to register at ADA to get them, but they are awesome!

CHC Dental vendors: Community Health Center's vendor is Apteryx, using their Xray DCV program. There are quite a few of them out there so our IT strongly recommends you look for the one that would work best for your situation
